Sales of the new (innovative) products/services/technologies as a share of annual turnover: 21%-30%

Type: Producer; Engineering; Research; Service; Trade

Main activities/description of business profile:
Biosan focuses on production of Medical-Biological Research and Technologies. Biosan philosophy is to develop modern exciting personal products for sample preparation in the field of genomics, proteomics and cellomics. The latest trends are the result of diagnostics technology shifting on a level of detection of bio - polymorphism of genetic, metabolic and cell diseases. Biosan has focused all the efforts on sample preparation to help minimise the number of mistakes during procedures. Mistakes accumulate due to smaller sample volumes used, lack of intermediate temperature control during mixing, lack of systems for air deactivation in laboratories during operation. Innovation, design and focus on the individual consumer proved to be in demand in the world biotechnological market and during recent years Biosan's Personal Laboratory products have become well-known all over the world under different leading brands (e.g. Boeco, Grant-bio, KiskerBiotech, Seoul Biosciences, Iwaki, Lab4You, Вектор-Бест, etc.). In Europe, Russia and CIS countries Biosan market under our own.

Main markets: EU, Russia, CIS

Company offers: Development, production and distribution of products for sample preparation for the needs of laboratories.

Planned Turnover in 2011 (Euro): 46 759

Investments in development of new products, services, technologies as percentage of annual turnover: >4%

Sales of the new (innovative) products/services/technologies as a share of annual turnover: >31%

Type: Service

Main activities/description of business profile:

Data Pro Grupa Ltd has declared that company's mission is to improve the quality of life by using information and communication technologies. This is why the main business activities are linked with education and health sectors.

Two main goals of the company are: to develop and implement innovative and progressive learning solutions based on overall tendencies in education and to develop and implement new ICT solutions in medicine and health care.

Since 2006 Data Pro Grupa Ltd. has been working on developing new computerized learning system – GenExis. The initial idea of GenExis was to develop a learning platform for vocational education and training. Today GenExis can be used as a fully online distance learning solution for any subject, study program or educational sector. The unique feature of GenExis is the content generation principle that is incorporated into the content editor. Each learning object in GenExis is created in a form of template with variable components that randomly generates 10 or more variations.

GenExis is already being used in Bicton College (UK) and in more than 10 schools in Latvia. It is also being implemented on national level in Slovak Republic (as a part of two projects 'Modernization of Education process in Primary Schools' and 'Modernization of Education process in Secondary Schools').

Based on GenExis System new portal uzdevumi.lv for school education was developed and launched in Latvia

in 2009. The portal offers pupils an opportunity to train on their own for the future tests and exams, to participate in competitions and win amazing prizes, to follow their learning progress, to solve daily exercises and to search for new learning opportunities. For e-health monitoring Data Pro Grupa Ltd. has developed Heart Passport - monitoring system for screening of cardiovascular system of Latvian children and teenagers. The remote patient monitoring solution is designed to perform early diagnostics of cardiovascular diseases for pupils. Heart Passport includes a web-based E-MED centre, software application and wireless 1-lead cardiograph (Cardie). The system provides a patient data management system that digitally stores results of various diagnostic tests. Designed to address a variety of healthcare settings, our system offers operational capabilities in health centres at schools bringing the service close to its main target group. At the moment 25 schools in Latvia are already using this service.

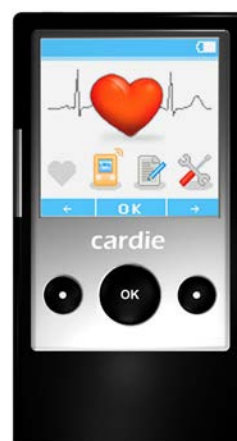

Main markets: EU, Russia, Ukraine.

Company offers: E-learning solutions, e-health monitoring solutions.

Interested in co-operation: End users; Research&Development; Joint venture

Certificates in use: ISO 9001:2008, Information technology, education and biophysical measurements system design, development and maintenance, since 2007.

Other specific information: Wireless 1-lead cardiograph "Cardie" ("DP-ECG-1") is certified by the Service of Health Care and Social Development Control of the Russian Federation (registration certificate nr. ФС3 2008/03344).

Main activities/description of business profile:
The up-to-date log house factory Dores is established combining the wisdom and cultural heritage of our forefathers together with modern technology and fine sense of style. It is the place where high quality timber meets knowledgeable log house jewellers to turn into home of life, relaxing bathhouse or contemporary building for any purpose. Our craftsmen have found a unique corner joint solution that overthrows the traditional opinion on a log house in terms of shape, wind and water resistance. It is the most up-to-date log house factory in the Northern Europe. It covers a full production circle from a fresh cut timber to a milled laminated log. In manufacturing only most recent and innovative technologies are used. All timber suppliers hold an international quality certificate. Delivery to anywhere in the World. Eminent milling and unique corner joint ensures high frost, wind and water resistance. High quality laminated log ensures low settling percentage.

Main markets: Latvia, Lithuania, Estonia, Germany, France, Spain

Company offers: Log houses and wood constructions from laminated and planed beams

Core business of EDGE Technologies is development and implementation of telecommunication equipment and solutions. EDGE Technologies is exclusive distributor of ZTE Corporations products and solutions in territory of Latvia. Same time, our team's know-how and international cooperation is allowing us to develop our own solutions, in cooperation with R&D and production centres in Asia. As first step towards our product portfolio was launch of SFP/XFP Optical transceiver product line, and we continue to work on other new products. EDGE Technologies offers a broad product line of high quality and price competitive optical network transceivers in a variety of packaging configurations which have applications primarily in metro and access networks.

Main markets: Latvia, Lithuania, Estonia

Company offers: Data Communication solutions and Optical Transceiver product portfolio.

Interested in co-operation: End users; Distribution

Main activities/description of business profile:

EkoMako Ltd is offering egg noodle made in Latvia after granny's recipe. In the assortment of the enterprise there are several sorts that differ not only with their form, but with the particularity of their tastes. Main value of the product is fresh, natural ingredients from Latvian farms as well as handwork that give noodle special taste and distinguished quality. No artificial colors, preservatives or other chemicals are used during manufacturing. Novelty – sweet egg noodle. Made from berries grown in Latvia those are rich with minerals, vitamins and biologically active substances. These noodles are foreseen for preparation of natural milk soups. Sweet noodle is a delicious tuck in everyday menu. EkoMako Ltd is actively introducing line of products from biologically grown ingredients thus supplying consumers with fresh, tasty and genuine food, taking into respect natural ecosystems. That is a reason why we produce biological egg noodles using locally grown materials from biological farms.

Type: Producer

Main activities/description of business profile:
The new technology, offered by Lateus, can get synthetic oil through biocatalytic cracking, with a very high quality of algae biomass. The technology is based on Eichornia cultivation plant in a specially-designed and intended basin. The essence of technology is to obtain maximum energy from organic products in the synthesis of which the living cell has spent less energy. This technology is a completely waste-free production of fuel from renewable source (algal mass). Production of synthetic fuel in closed cycle is one of the most promising technologies in alternative energy. We use capacitive type technique reactors. The equipment differs in simple operation, high productivity, as well as technology to ensure high quality of products.

Main markets: Latvia

Company offers: Fuel, oil

Interested in co-operation: Joint venture

Certificates in use: ISO 9001

Company offers: Innovative Prime Composite technology for industrial concrete floors.

Interested in co-operation: End users; Research & Development; Component/material supplier; Cooperation in production/ manufacturing; Subcontracting; Licensing; Testing

Certificates in use: PrimeComposite patent Nr. LV 14122 / int.CIE04F15/12. (20.04.2010.)

Other specific information: Primekss, a concrete technology company, received the Most Innovative Product of 2009 Prize, awarded by the Latvian Ministry of Economics and the Investment and Development Agency of Latvia under the patronage of the President of Latvia, for their CO₂ saving concrete technology. The Copenhagen summit has underlined the inability of world leaders to achieve progress in tackling climate change. It is now down to individuals to create the technological breakthroughs that would lead to reduction in greenhouse gases. Primekss has created a new type of concrete that allows CO₂ emissions to be reduced by up to 50 per cent in comparison to traditional concrete. The improved concrete has been successfully used in buildings, especially in the laying of floors, across Scandinavia - in Sweden, Finland and Norway, as well as in the countries of North-Eastern Europe and Israel. The concrete industry creates more than 5 per cent of CO₂ emissions worldwide, and a significant reduction of emissions in such a major polluter is therefore an important achievement. The new concrete is created by improving the concrete matrix with additives and fibers. The resulting concrete is much tougher, allowing slender structures to be built. The new technology has been used in projects built by US-based developer of warehouse buildings ProLogis (NYSE:PLD), Finnish retailer SOK Group, the Postal Service of Norway and lot of other clients.

Main activities/description of business profile:

Real Sound Lab is an independent, R&D focused company, developing technology solutions for sound engineering in the professional and consumer markets. Real Sound Lab is continuously developing a proprietary and patented technology called CONEQ™. CONEQ™ is a unique technology for measurement and equalization of Acoustic Power Frequency Response (APFR) of loudspeakers. After applying the CONEQ™ correction filter to the audio signal, the reproduced sound is extremely close to that of the source material, as if the original sound source were relocated at the location of the loudspeaker.

Main markets: EU, China, USA, Japan, Russia

Company offers: For the professional audio markets, Real Sound Lab offers CONEQ™ Workshop measurement software, three models of hardware equalizers (APEQ-2pro, APEQ-2pro DIO and APEQ-8pro DIO) and four models of software VST/RTAS plug-in equalizers (CONEQ™ P2, P2pro, P8 and P8pro). The company is also active in the licensing business based on close technological cooperation with its customers, mostly electronic consumer goods producers as well as producers of specific technological solutions

(chips). In this context, specific CONEQ™ technology solutions are developed and integrated into the final electronic consumer goods.

Interested in co-operation: End users; Distribution; Licensing

Certificates in use: PSE (Professional and electronic consumer goods certificate in Japan); KTC (Korea Testing Certification or Safety Certification Scheme for Electrical Appliances)

Turnover in 2010 (Euro): 273 270

Planned Turnover in 2011 (Euro): 316 393

Investments in development of new products, services, technologies as percentage of annual turnover: >4%

Sales of the new (innovative) products/services/ technologies as a share of annual turnover: >31%

Type: Producer; Service; Consultancy; Distribution

Main activities/description of business profile:

SIA Solcraft is founded in 1991 and is one of the first Latvian companies in IT sector. Our company's main activity is development and distribution of the software FinaWinSolis® - a premium class enterprise resource planning (EPR) and customer's relationship management (CRM) software for public sector and all branches of private sector. We have a team of programmers, who are highly experienced and constantly work on innovation of our software. About a half of our turnover are investments in development of our software. As a result we develop an entirely new version of our software FinaWinSolis® every 3 - 4 years.

Main markets: at the moment Latvia, but in the nearest future we are planning to start exporting to EU and Russia

Company offers: At the moment we offer our clients the 6th version of FinaWinSolis® software, which is based on the most modern world-recognized technologies and innovations, Open Source products. Our software FinaWinSolis® is a convenient, fast, easy to understand and easy to use software with unlimited analytical framework and a wide range of built-in reports. Our software is suitable for small and medium-sized enterprises. FinaWinSolis® complies with all legislative requirements of Latvian and European Union laws and regulations.

FinaWinSolis® is a complex system which consists of the following modules: Finances, Documents, Salary, Human

Resources, Self-service (for employees, managers, clients), Fixed Assets, Warehouse, Workguide (CRM), Document Workflow (document management).

The advantage of our software is that we do not sell it "in a box" – instead, we adjust the software individually to every client and implement non - standard requirements.

Interested in co-operation: End users; Research & Development; Distribution; Joint venture; Cooperation in production/manufacturing

Certificates in use: ISO 9001:2008

Other specific information: We are interested in cooperation with a view to carry out joint development of project, process management. We are also interested in exporting our software to EU and Russia. It is easily possible as FinaWinSolis® can be quickly translated to any language and adjusted to local legislation.

Investments in development of new products, services, Technologies as percentage of annual turnover: >4%

Sales of the new (innovative) products/services/technologies as a share of annual turnover: >31%

Type: Producer

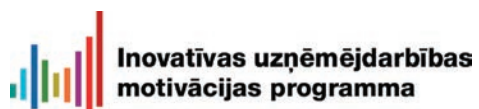

Main activities/description of business profile:
Company's philosophical ground is social business – creation of social equality and respect towards each other by investing ideas, skills and big work. Woolly World toys combine original handwork with natural wool features. In every toy's creation have been invested long hours of handwork. First step is making fabric – felting fine sheep wool nap does this. Then it is cut into necessary shapes and sewn together. Last step is needle felting in other words – Teddy's shaping. People from Liepaja's blind society do this last step. For Teddy's fur is used fine merino sheep wool from New Zealand but the Teddy's belly is filled with domestic wool.

Main markets: Latvia, Germany, Japan

Company offers: Handmade toys – Teddy bears

Interested in co-operation: Distribution; Component/ material supplier
